I mustn't lie, but I really had difficulty installing Hadoop on my unit since it was not compatible on my current Windows OS. So I had to find alternatives and ask my classmate if I could use their computer(hence there is a name at the bottom left corner of the screenshot). Installing Hadoop is really a tedious job since you have to configure the two applications(java 8 and Hadoop itself) which was hard for me since the some of links for the applications that were needed we no longer available or either locked since it was uploaded in a google drive and needs to have authority to open it.
